

Project leader / business developer for a startup company within single molecule microscopy for life science applications

Envue Technologies AB, a Chalmers Ventures portfolio company, currently has a very exciting offer for a person who wishes to be responsible for the business development in an enterprise that will revolutionize the way we view the molecular world and develop drugs. The technology is close to the market with established contact to the pharma industry, and there is a possibility to become co-founder. We are in the beginning of an exciting journey and are looking for the right person to join our team, and help us bring this technology to the market.

The technology

Label-free single-molecule microscopy methods are seen by many as the next crucial technology within life science to develop more efficient drugs or to understand how biomolecules and other biological objects, like exosomes or viruses, interact with living organisms or each other. Envue's patented Nanofluidic Scattering Microscopy method makes this possible in a revolutionary way, where no labels are required, and where the biomolecules and bio-objects can be studied in free motion, without surface attachment or need for complicated affinity-type biochemistry. In this way it enables the direct visualization of the molecules of life using a cutting-edge combination of nanotechnology and light. Envue aims to bring this disruptive nanotechnology from the Chalmers clean room to the world, and to create a venture that makes real impact in life science and thereby human health.

The offer

- The possibility to help commercialize a patented technology within advanced single molecule microscopy for life science applications
- Three knowledgeable researchers with high engagement in the company
- Established interest from international customers
- Some financing, and the opportunity to raise more in form of both soft money and investment
- Possibility to become co-founder and key person in the company

Project leader role and profile

- Business development competence for the team
- Some knowledge and network within life science and genuine interest in new technology
- Sales experience (B2B)
- Funding and investment competence
- Long-term interest in joining the company

Form

Full-time/part time employment or consultancy for 3-6 months. Thereafter, after acceptance to CVs accelerator program and secured financing, future role agreed upon with team.

Short-term goal

Project ready for Chalmers Ventures Accelerator program and pre-seed investment by 2021.
